This is the world-famous Aerobus by Checker Motors. Built to last, built to take it, this multi-passenger limousine has created a new concept in economical, comfortable and convenient transportation for businesses, institutions, service firms... even big families! It is the result of persistent requests from fleet owners all over the world to create a special-purpose vehicle with the economy of a taxicab, the comfort of a limousine and the ruggedness of a bus. Built at the same plant and using the same skills, craftsmanship and materials as on the billion-mile Checker taxicab, the Aerobus was conceived as the first and only totally effective method of transporting 9 to 12 people short or extended distances and with complete comfort, outstanding safety and true economy. Checker has built special-purpose fleet vehicles for nearly half a century. Taxicabs that defied weather and time—fleet cars that provided the utmost in passenger satisfaction and operator efficiency. The Aerobus, however, takes taxicab and fleet economy, convenience and safety several steps beyond—and provides a totally satisfactory service for 9 and 12 passengers... with room for luggage or packages or equipment... with style and power features never before offered in a commercial car. *The Aerobus is built from the ground up for the purpose of moving people. Not a "stretch out"; not a converted stock car—but a built-for-the-purpose, built-to-last vehicle of amazing stamina and comfort.*

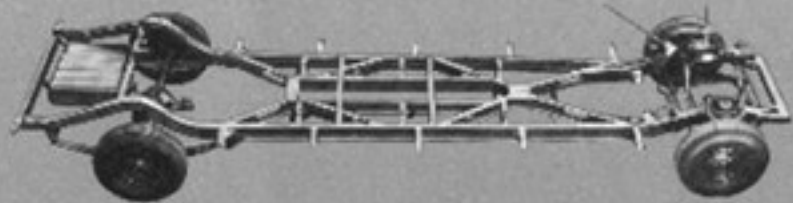

Only Checker gives you this super-strong, super-safe foundation.

Only the Checker Aerobus has the strongest chassis to accommodate the fleet operator's most demanding requirements. No chance of bowed door frames or sagging floors! Only the Checker Aerobus is built to withstand the roughest, toughest road shocks. Only the Checker Aerobus is built to take it—durably and strong enough to hit road holes at crushing speeds and fully loaded, without discomfort to passengers... without due regard to the heavy-duty suspension system... that drives worry or concern!

Only Checker gives you this super-safe, super-sturdy frame.

The super-strong, super-safe double channel double X-tube frame is the backbone of Checker's built-to-last ruggedness. Extra cross members, extra steel, extra strength and extra care go into the building of every Checker Aerobus... engineered to help the operator provide a safer, more satisfying service. No other commercial vehicle... no "stretch-out" or converted stock car... can deliver this kind of superior frame—this kind of strength and security.

Only Checker gives you this built-to-last vehicle of amazing stamina and comfort.

Built from the ground up to take it! Only the Checker is built for the purpose, with features that can be replaced quickly, easily and inexpensively. Removable front and rear bumpers and on axles removed and replaced with. And only Checker offers factory fitted, lock-pinion fasteners including fenders, long wearing upholstery fabric, tough, weather's front and door panels that can be quickly removed. Expect extra passenger miles, with proven economy, speed and the finest craftsmanship ever... unrivaled by modern and classic.
