Toyota Quality

Quality is built right into the production process from the selection of raw materials, right down to the vehicle's final inspection. And it is the responsibility of everyone to ensure the highest quality possible on each and every vehicle. It's through Toyota's philosophy of 'Kaizen' that we are always looking for ways to continually improve. That's how we make things better.

THE TOYOTA PRODUCTION PROCESS is one that is constantly evolving. With our "Just-In-Time" practice, the goal is to make certain that during the manufacturing process, only what is needed gets produced. The result is twofold: because there's no excess supply, any issues are exposed and promptly resolved to ensure that everything off of the Toyota assembly line is of exceptional quality.

THE HUMAN TOUCH. As impressive as the machinery is, the achievement of perfect fit and finish is also the result of continuous human touch for every step of the way.

TOYOTA CANADA COLD RESEARCH CENTRE. Located in Timmins, Ontario, our teams test Toyota vehicles in actual Canadian winter conditions at our cold weather testing track to ensure that they remain dependable throughout the long winter months.

- [4] The Toyota DVD based Navigation system is designed to assist in locating an address or point of interest. Discrepancies may be encountered between the system and your actual location. Changes in street names, road closures, traffic flow or other road system changes may affect the accuracy of the mapping software. Rely on your common sense to decide whether or not to follow a specified route. Detailed coverage is not available in every city. Optional periodic geographic updates are available at an additional cost. The Navigational systems in some vehicles are available with bilingual capability. Please see your Navigation system Owner's Manual and your Toyota Dealer for further details.
- [5] Vehicle Stability Control (VSC) is an electronic system designed to help the driver maintain vehicle control under adverse conditions. It is not a substitute for safe driving practices. Factors including speed, road conditions and driver steering input can all affect whether VSC will be effective in preventing a loss of control.
- [6] Brake Assist is designed to help the driver take full advantage of the benefits of ABS. It is not a substitute for safe driving practices. Braking effectiveness also depends on proper brake-system maintenance and tire and road conditions.
- [7] Smart Stop Technology operates only in the event of certain simultaneous brake and gas pedal applications. When engaged, the system will reduce engine power to help the brakes bring the vehicle to a stop. Factors including speed, road conditions and driver input can all impact stopping distance. Smart Stop Technology is not a substitute for safe and attentive driving and does not guarantee instant stopping.
