

## Travel in Style

Since its launch in Spring 1982 the Peugeot 505 estate car has been accepted as being one of the most modern and practical large family estate cars on the market today. Its classic aerodynamic lines reflect standards of comfort and practicability which are unmatched by its competitors. Not only will it seat five or, alternatively, eight in the Family versions, but it will carry an enormous amount in its vast load area.

The 1983 505 range offers you a selection of five different

models, 2-litre petrol-engined versions of the GL and GR models and also a 2.5 diesel-engined GRD. Then, as a complete alternative, there is the eight seater Family in both petrol and diesel-engined forms.

Within the range there is a spread of gearboxes. The GL and GR petrol-engined models have a 4-speed manual box as standard. A 5-speed manual box is standard on the Family petrol and GRD and Family diesel derivatives. A 3-speed

automatic gearbox is available as an option at extra cost on the petrol-engined GR and Family models.

All versions, except the GL, are fitted with power-assisted steering so that, even when fully loaded, steering effort is minimal with a high degree of manoeuvrability. The braking system is equally sophisticated being a split circuit with discs at the front, drums at the rear and servo-assistance to ensure

optimum braking power when under full load.

Peugeot's reputation for strength and ruggedness is partly founded on the suitability of its suspension system and the 505 Estate reinforces this image. The front suspension is independent with coil springs, double acting telescopic shock absorbers and an anti-roll bar. The live rear axle also has coil springs and telescopic shock absorbers.

# Travel in Space

Unlike its main competition, the 505 Estate is not just a stretched saloon. It was designed as an estate, as is evident by the fact that its 114" wheelbase is over 6" longer than its saloon counterpart.

The counterbalanced fifth door opens up to reveal a massive load compartment which on GL and GR versions provides a load floor length of over 91" with the seats folded, and over 81" on the Family models. The load floor width is 45.3" with a

maximum height of 32.5". On the Family derivatives this results in a load area, with seats folded, of 68.5 cu. ft. and on GL-GR (5 seater) models an amazing 79.0 cu. ft. By any standards, the Peugeot 505 Estate has to be the most practical large estate on the European market.

Look at that low loading height and, most important, the absence of any lip. You don't need to 'lift' your luggage and stretch. Simply load it onto the load floor and push.

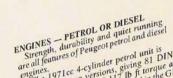

are all features of reugeorpesson.

In engines.
The 1971cc 4-cylinder petrol unit is DIN available in two versions, giving forque at 5000 rpm and 117 lb ft to fitted in the GR when fitted in the GR 2500 rpm in the GL. ersions power out-put and Family petrol versions power 200 rpm is increased to 95 DIN bhp at 3000 rpm. and 190 lb ft torque at 300h petrol and 190 lb ft torque at 300h petrol and 190 kg ft ersions is quite remarkable at over 38 mpg versions is quite remarkable at over 38 mpg

at a constant 56 mph in the GL and GR models and over 40 mpg in the Family version when linked with a 5-speed agarbax. gearbox.
The 2498cc diesel engine fitted to both grant from the GRD and Family Diesel models of the GRD and Family Diesel models of the GRD and 1500 rpm and 111 lb ft torque at 2000 rpm. The real strength of the diesel power units in excellent fuel economy, where at a constant excellent fuel economy where at a con be speed of 56 mph over 44 mpg can be achieved.

The 505 range is available with TRANSMISSION either 4 or 5-speed gearbox, or a auner 4 or 3-speed gearpox, or a 3-speed automatic option depending on the model. The GL and GR on the model. The GL and GR 5-seater petrol models are fitted as standard with the well tried and tested

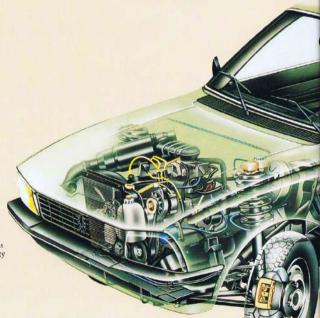

4-speed synchroniesh gearbox which historically has fully justified Peugeot's reputation for strength and

onusiness. The 5-speed synchromesh gearbox The 5-speed synchromesn gearbox fitted to both diesel engined models and the petrol engined 505 Family provides greater flexibility and is more

It is the match of gearbox to engine refined.

that produces remarkable fuel that produces remarkable fuel consumption figures and, even at a constant 75 mph, up to 32.5 mpg can be achieved on the GRD and Family

The 3-speed automatic gearbox is the 5-speed automatic gearbox is available on the 505 GR and Family available on the 303 GR and ramily models and although it offers advantages in all traffic conditions it is particularly appreciated in heavy city traffic.

### Active and Passive Safety

Safety, both active and passive, is a key requirement in the original design of all Peugeot models.

ACTIVE SAFETY

Active safety is best described as those elements in the vehicle design which help you avoid being involved in an accident, whereas passive safety is the protection you enjoy within the driving compartment.

The 505 Estates benefit from independent front suspension with coil springs and double acting telescopic hydraulic shock absorbers with an anti-roll bar. Coil springs and telescopic shock absorbers are also used on the rear. The suspension has been finely tuned to guarantee excellent roadholding.

The braking system is equally sophisticated for maximum

stopping power. It is a servo-assisted split circuit system with discs on the front and drums on the rear. A rear brake compensator valve on all models ensures automatic adjustment of pressure applied to rear brakes, thus preventing premature wheel locking. There is even a warning light on the fascia which lights up to indicate low brake fluid level or brake pad wear, as well as a separate handbrake warning light.

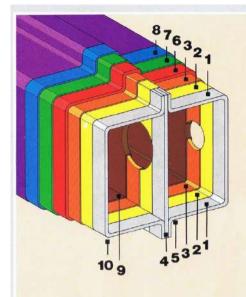

These engineering features contribute to your safety.

#### PASSIVE SAFETY

Passive safety is that which minimises the consequences of an accident in which you may be involved. On the 505 Estates the front and rear ends of the body shell are designed to absorb impact through progressive deformation of the structure, with maximum protection of the passenger compartment.

Another aspect is the two spoke safety steering wheel which is mounted on a collapsible energy-absorbing steering column. Finally interior appointments are designed in such a way as to

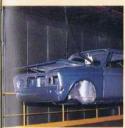

eradicate all sharp edges on the fascia panel. Safety is a key feature.

### **OUTLINES OF THE VARIOUS** PROCESSES Drying over Immersion in the cataphoretic paint tan Withdrawal of electrodes

STEEL PANELS: All body parts are thoroughly degreased to remove oil deposited during the press operation and to ensure full adhesion of the protective finishes. Corrosion resistant zinc or galvanised plated panels are used in vulnerable areas or areas that would be difficult to protect after assembly.

2 PHOSPHATING: This gives protection against impacts and flaking; it also improves the adhesion of the resin film in the cathodic bath. Some box sections are cleaned and phosphated before the body shell is assembled.

3 CATAPHORETIC BATH: This deposits a corrosionproofing epoxy film 15 to 20 microns thick on the whole body shell. Box sections are pierced to assure the protection of internal surfaces.

4 JOINT SEALING: Sealing between adjacent panels is assured by mastic sealing strips on the inside and outside.

5 CRACKLE FINISH ANTI-CHIPPING COMPOUND (PVC): Oven baked, this ensures protection to the parts of the body that are subject to abrasion from road chippings and stones (the coat is

6 PRIMER: The paint undercoat includes rust-inhibiting pigments (zinc chromate) to further improve the anti-corrosion protection. This special, flexible primer also has anti-chipping properties.

7 ACRYLIC LACOUER: This thermosetting paint is baked at 130°C, the fast evaporation of the solvents giving a coat with high protective quality.

8 CLEAR VARNISH: Applied on top of metallic and black paints, this gives an increased brilliance and ensures protection of the colour pigment from the corrosive elements.

9 WAX: Pressure injected into the box sections, wax protects these inner surfaces and prevents water ingress between the panels

10 THICK WAX AND BITUMEN COMPOUND: This is sprayed on to the underside of the body - including the wheel arches and suspension.

### PEUGEOT 6 YEAR ANTI-CORROSION WARRANTY

All Peugeot passenger vehicles benefit from the Peugeot six year anti-corrosion Warranty.

The results of extensive research and tests carried out by our Study Departments over many years have been incorporated in the numerous sophisticated and advanced techniques, special materials and assembly procedures employed in the manufacturing of our vehicles.

Some of the measures at present incorporated in the manufacturing of our vehicles are as follows:

- \* Corrosion resistant zinc or galvanised plated panels used in vulnerable areas.
- \* Weldable primer is used in all joints below the waistline of the vehicle.
- The application of the initial primer coat is by total immersion in a CATHODIC type Electrophoresis bath. The advantages of primer application for Electrophoresis
- · both internal and external surfaces can be treated efficiently:
- · the film of primer is uniform in thickness;

- · good adhesion of the coat of primer:
- · high level of anti-corrosion protection.
- \* Crackle finish anti-chipping compound is applied to wheel arches and underbody areas. The PVC based product is sprayed at high pressure onto the elements and sections to be protected and stoved at 160°C to attain the crackle type finish that provides the important anti-chipping protection, particularly for wheel arches and door sills
- The whole of the underbody area, including mechanical components, is sprayed with a thick bitumen wax compound.
- The hollow box sections in the body shell, panels and crossmembers, particularly on the underbody, are protected by the injection of a bitumen wax compound.

All these measures provide added proof — if indeed it was necessary to demonstrate that Peugeot vehicles are efficiently protected against the natural phenomenon of corrosion, and thereby make the purchase of a Peugeot a good investment.

The warranty, which is against perforation of the bodywork as a result of corrosion, is transferable to second or subsequent owners and is granted in respect of vehicles registered and primarily used in Great Britain, Germany, Austria, Belgium, Denmark, Eire, Federal Germany, Finland, Greece, Metropolitan France, Holland, Italy, Luxembourg, Norway, Sweden and Switzerland.
