

**TOYOTA**

# **Corolla T Sport Compressor**

## Conceived on the track, born for the road

From Toyota Motor Sport, the team responsible for Toyota's Formula 1 team, comes the Toyota Corolla T Sport Compressor, the fastest and most powerful Corolla ever.

- Powered by a supercharged 1.8 litre VVTL-i engine
- Delivering exceptional response at all engine speeds, and particularly impressive performance in the mid-range, where it's needed most
- Power output of 165 kW (225 DIN hp) at 7800 rpm
- Torque of 230 Nm/3600 rpm
- 0-100 km/h in 6.9 seconds, top speed 235 km/h\*

The supercharger is the key to this performance. It boosts outright power across the operating range, to ensure response is instant from idle to red-line. The Corolla T Sport Compressor's chassis has also been designed to thrill on a twisting road.

Exclusive features include:

- Ultra lightweight, 17" alloy wheels
- 215/45 section Pirelli P-Zero Rosso tyres
- Suspension tuned on the toughest roads in Europe
- Improved drivability thanks to the lowered suspension

The Corolla T Sport Compressor more than looks the part and can be easily distinguished by its rear spoiler and twin exit muffler. Inside, it benefits from a leather-bound steering wheel, handbrake and gear lever.

The result is a car that marries thrilling performance to exceptional handling, stability and safety. It's the fastest and most fun Corolla in the model's 39-year history. And it's destined to become the most coveted, too.

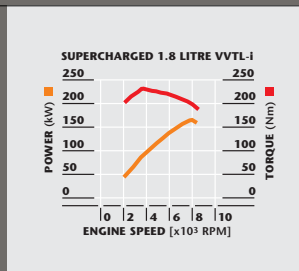

\* As tested on a closed circuit.
