\* Fuel consumption and CO<sub>2</sub> figures are obtained under standardised EU test conditions (Directive 93/116/EEC). This allows a direct comparison between different manufacturer models but may not represent the actual fuel consumption achieved in 'real world' driving conditions. More information is available on the Volkswagen website at [www.volkswagen.co.uk](http://www.volkswagen.co.uk) and at [www.dft.gov.uk/vca](http://www.dft.gov.uk/vca). CO<sub>2</sub> is the main greenhouse gas responsible for global warming. This information should be used for illustration purposes only. Choosing larger alloy wheels than standard may result in increased fuel consumption as well as higher CO<sub>2</sub> emissions and subsequently increased Vehicle Excise Duty (VED) band, and BIK rates paid for company car drivers will increase. In some instances, the recommended 'On the road' retail price paid for the vehicle may increase as a result of the increased VED rate. The specifications contained in this price list are for information purposes only and are subject to change. SCR (Selective Catalytic Reduction) requires AdBlue®, please see page 24 or visit [www.volkswagen.co.uk/technology/adblue](http://www.volkswagen.co.uk/technology/adblue) for more details. **BMT refers to BlueMotion Technology.**

# VEHICLE EXCISE DUTY (VED) AND ADDITIONAL 'ON THE ROAD' COSTS

On 1 May 2009, there was a change to the Vehicle Excise Duty (VED) tax bands. Cars are taxed according to their CO<sub>2</sub> emissions, in bands A to M.

All vehicles first registered on, or after, 1 March 2001 are subject to a new form of VED (Road Fund Licence). This new duty is based upon the type of fuel the vehicle uses and its carbon dioxide (CO<sub>2</sub>) emissions level, measured in grams per kilometre (g/km). To help you identify the duty you will pay, the DVLA has created thirteen categories for petrol and diesel engines. Increased weight of a vehicle, including higher trim levels and the addition of options will have a detrimental influence on the level of fuel consumption and CO<sub>2</sub> emissions produced.

The CO<sub>2</sub> and fuel consumption figures are obtained from tests on a representative vehicle of the type, conducted and approved in accordance with Council Directive 80/1268/EEC as amended by Directive 1999/100/EC (or later) on the approximation of the laws of the member states relating to the carbon dioxide emissions and the fuel consumption of motor vehicles.

## Six months' VED (Road Fund Licence)

As of 1 April 2010, six months' Road Fund Licence will not be available for some vehicles at first registration. VED rate for bands A-D is zero and will not be eligible for a six-month Road Fund Licence at first registration. VED rate for bands E-G will be eligible for a six-month Road Fund Licence at first registration. VED rate for bands H-M will not be eligible for a six-month Road Fund Licence at first registration.

## Subsequent year's VED (Road Fund Licence)

Vehicles with a VED rate of £55 or above will be eligible for a six-month Road Fund Licence.

## VED 'First year rate' refund

Refunds on a vehicle's Road Fund Licence in bands H-M will only be calculated on the basis of the 'First year rate' if the vehicle has been stolen, scrapped or moved into a tax class where no VED is payable (e.g. cars for the registered disabled).

If the refund is being applied for because the vehicle has been sold, exported or taken off the road, it will be calculated according to the 'Standard rate' of VED applicable to that vehicle.

Your Volkswagen car is fitted with an advanced emissions control system, which helps your vehicle meet the latest EURO 6 exhaust gas regulations.

## How does the system work?

AdBlue®, a water/urea based additive, is stored in a tank (like diesel fuel), however, unlike fuel it is not injected into the engine, but directly into a specially modified part of the vehicle's exhaust. This begins a chemical reaction which removes the polluting oxides of nitrogen (NOx), converting them into harmless oxygen and nitrogen in a process known as Selective Catalytic Reduction, or SCR for short. SCR is only applicable to diesel engines and the more economically you drive, typically, the less AdBlue® you will use.

The size of the AdBlue® tank fitted to your car will vary depending on which Volkswagen model you have, therefore the interval between top-ups will vary. In addition, many factors such as mileage, journey type, driving style and environmental conditions can influence how much AdBlue® is consumed. A passenger car can consume approximately 1.5 litres of AdBlue® every 620 miles (1.0–1.5 litres for the Passat and Passat Estate). The chart below details the AdBlue® tank size and location.

Model (SCR derivatives only)	Tank size (Approximately)	AdBlue® tank filler location	Initial warning of low AdBlue® (2,400km/1,500 miles to go) can be expected to occur at:
New Tiguan	13 litres	Next to fuel filler nozzle	3,000 to 4,000 miles or sooner*

\* Distances are approximate and the warning light may come on sooner depending on driving style, journey type, engine and vehicle load and environmental conditions.

## How will I know if the system needs topping-up?

A series of warnings will be given via the driver information system, accompanied by advice/messages.

The first message is displayed when the remaining range is approximately 1,500 miles, and is repeated every 62 miles until the range reaches 1,000 miles, at which point the warning turns amber. This warning is repeated every 31 miles and is accompanied by an audible tone. If these warnings are not acted upon, the warning turns red; once this happens the car will not restart once the ignition is turned off. This is not a fault, but a required feature of the system. If this stage is reached the system will need a full top-up before the car can be restarted. Further information is available in the vehicle handbook.

## Why should I use a Volkswagen Authorised repairer for top-ups?

- AdBlue® top-ups at authorised repairers are extremely competitive and charged by the litre, so you only pay for what you need
- Authorised repairer staff are trained to handle AdBlue®
- AdBlue® tanks need special adaptors on fillers to ensure there are no spillages
- Volkswagen do not recommend keeping top-up bottles in cars

The top-up bottles supplied by Volkswagen have a capacity of 1.89 litres, and come complete with the adaptor nozzles that fit the Volkswagen AdBlue® tank. These are available from all Volkswagen Authorised repairers

## Important information

- AdBlue® is not a fuel additive. This is why there is a separate AdBlue® tank
- If you put AdBlue® in your fuel tank by mistake, please do not start the engine, but contact a retailer for help
- Put only AdBlue® in the AdBlue® tank; do not fill the AdBlue® tank with any other liquids
- Prevent anything from contaminating AdBlue®
- If small quantities of AdBlue® come into contact with the vehicle's paintwork, for example, wipe them off and if necessary rinse the area with water

AdBlue® warning lights.

### SERVICE INTERVALS

Volkswagen is pleased to offer you a choice on how your Volkswagen is serviced. The appropriate selection is entirely dependent on how the car is likely to be driven and its general use. To help you identify which type of service would be most suitable, please refer to the following guide.

The Fixed Service is recommended for vehicles that will cover less than 10,000 miles in 12 months and if the vehicle is likely to be used in the following way:

- Predominantly urban driving, short journeys with frequent cold starts.
- Activities regularly producing high engine loading, e.g. frequent hill climbs, driving with vehicle fully loaded and towing.
- Uneconomical driving style using high rpms with heavy acceleration and heavy braking.

The service intervals for the Fixed Service are as follows:

- Oil change service – After 1 year or 10,000 miles (15,000km), whichever is soonest.
- Inspection service<sup>2</sup> – First after 2 years or 20,000 miles (30,000km), then every one year or 20,000 miles (30,000km), whichever is soonest.

### SERVICE INTERVALS (CONTINUED)

The Flexible Service is recommended for vehicles with daily mileage of more than 25 miles where the vehicle is driven regularly mainly on longer distance journeys. The vehicle is driven mainly at a constant speed with minimum vehicle and engine loading, minimal towing and driven in an economical manner. With the Flexible Service the vehicle can cover anywhere between 10,000<sup>3</sup> and a maximum of 20,000<sup>3</sup> miles or 24 months (whichever is soonest) between oil changes.

The service intervals for the Flexible Service are as follows:

- Oil change service – According to flexible service interval display (after 2 years at the latest).
- Inspection service<sup>2</sup> – First after 2 years or 20,000 miles (30,000km), then every one year or 20,000 miles (30,000km), whichever is soonest.
