**Key**  
 - = Not available \* = These figures are for comparison purposes and may not reflect real life driving results which depend on a number of factors including the starting charge of the battery, accessories fitted (post registration), variations in weather, driving styles and vehicle load. For plug-in hybrid vehicles they were obtained using a combination of battery power and fuel, for battery electric vehicles after the battery had been fully charged. Plug-in hybrid and battery electric vehicles require mains electricity for charging. The fuel consumption, CO<sub>2</sub> and electric range figures were determined according to a new test (WLTP). The CO<sub>2</sub> figures were translated back to the outgoing test (NEDC) and will be used to calculate vehicles tax on first registration. Only compare fuel consumption, CO<sub>2</sub> and electric range figures with other cars tested to the same technical procedure. ^ = Combined power from Petrol and Electric engines Figures in ( ) apply to cars with automatic transmission.
