We haven't reinvented the wheel. Although after so many tests, you would almost suppose we had.

Audi cast aluminium wheels are subjected to constant strain during daily use. Comprehensive testing ensures that they nevertheless fulfil the high quality standards required of them. Complex casting processes also lead to very strong components, and the multiple coats of high-quality paint do not just create a stunning look but also offer effective protection against scratches.

Cast aluminium wheels

By undergoing a copper accelerated acetic acid salt spray test, for example. When our experts test the quality of Audi Genuine Accessories wheels, they are just as innovative as our designers. Intense heat, high humidity, strong sunlight – there is practically no limit to the number of possible tests. But the most extreme endurance test is the copper accelerated acetic acid salt spray test, known as CASS. In the test, wheels which have been previously damaged by simulated stone chips are sprayed with this extremely corrosive solution for several days. Yet they must overcome all these challenges without visible adverse effects – so that even after many miles, you can be as thrilled by the design of your Audi Genuine Accessories wheels as you were on the first day.

Style package

Designing products is not just about fulfilling technical specifications. It is about creating a living character between the two contrasting areas of form and function. Or, as is the case with the style package from Audi Genuine Accessories, to provide the vehicle's form with a sportier final touch. That's why the designers of Audi Genuine Accessories are involved in the development process for a new Audi vehicle from the very beginning. The result is an exceptionally balanced interplay between vehicle and accessories. Just like a tailor-made suit only really comes into its own when it is combined with accessories from the suit's fashion designer. Design as you have come to expect from Audi: with the power to transform a product into a living character.
