Notes regarding the charts above: Payload and Max Trailer Weights are ESTIMATED values. All values are shown in lb unless otherwise stated. Payload and Max Trailer Weight values are rounded to the nearest 10 lb. Payload = GVWR - Base Weight. GAWRs, GVWRs and GCWRs should never be exceeded. Recommended tongue weight determined by class of hitch receiver and hardware limits of upfit. Upfit or aftermarket equipment weight not included with Base Weight. Frontal Area: Maximum allowable Frontal Area, in ft<sup>2</sup> that the vehicle can project. For details on calculations, please refer to Ram Body Builders Guide. If VECI Label and Max Upfit Weight not available, vehicle is not restricted to MCVW, Frontal Area or Maximum Upfit Weight limits; however, GVWR/GAWR/GCWR cannot be exceeded.

Notes regarding the charts above: DRW = Dual Rear Wheel. Weights given in lb. Numbers in **Black boxes** reflect the maximum of that class. Payload and Max Trailer Weights are ESTIMATED values and rounded to the nearest 10 lb. Payload = GVWR - Base Weight. Payload and Trailer Weight Rating are mutually exclusive. GAWRs, GVWRs and GCWRs should never be exceeded. Trailer Weight Rating and Tow Vehicle Trailing Weight are calculated as specified in SAE J2807. Passenger Weight = 300 lb. Options Weight = 100 lb. Trailing Equipment Weight: 75 lb for conventional hitch, 70 lb for gooseneck and 250 lb for fifth wheel. Tongue weight: 10 percent of the gross trailer weight for conventional hitch, 15 percent of the gross trailer weight for a fifth-wheel or gooseneck hitch. Payload and GAWR should never be exceeded and must account for all of the above weights, including the appropriate trailing equipment and tongue weight. Box-Off Body Completion Weight = 80 lb per foot from end of cab to end of frame. The maximum tongue weight for Class V (hitch receiver) is limited to 1,800 lb. A fifth-wheel or gooseneck hitch is required for trailers over 18,000 lb. The 13,800-lb GVWR stated for Regular Cab, 4x2, 6.4L V8 with 4.10 axle ratio applies to Tradesman® and ST Packages only. For all other configurations (Regular Cab, 4x2, 6.4L V8 with 4.10 axle ratio), the GVWR is 13,700 lb.

Notes regarding the charts above: DRW = Dual Rear Wheel. Weights given in lb. Numbers in **Black boxes** reflect the maximum of that class. Weights are estimated values rounded to the nearest 10 lb. Payload = GVWR - Base Weight. Payload and Trailer Weight Rating are mutually exclusive. GAWRs, GVWRs and GCWRs should never be exceeded. 3500 Regular Cab, 4x2, 6.4L V8 with 4.10 axle ratio, GVWR of 13,800 lb applies to Tradesman® Package only. For all other price classes for this configuration (Regular Cab, 4x2, 6.4L V8 with 4.10 axle ratio), GVWR is 13,700 lb.

Trailer Weight Rating (TWR) and Tow Vehicle Trailing Weight are calculated as specified in SAE J2807. Passenger Weight = 300 lb. Options Weight is option content above 33 percent of sales volume. Trailer Equipment Weight = Class IV Hitch Receiver is 11.1 lb (if not already included in Options Weight). Trailer Hitch is 10 lb if TWR is less than or equal to 5,000 lb, and 65 lb if TWR is greater than 5,000 lb. 6. Payload and Trailer Weight Rating are mutually exclusive. 7. GAWRs, GVWRs and GCWRs should never be exceeded. 8. The recommended tongue weight for a conventional hitch is 10 percent of the gross trailer weight. The maximum tongue weight for Class IV hitch receiver is limited to 1,100 lb. 9. Weight-Distributing Hitch is recommended for trailers over 5,000 lb.

# ONE SIZE DOES NOT FIT ALL

Regardless of which 2023 Ram ProMaster® model you choose, fitting a standard pallet between the wheel wells won't be an issue. Need a shelf system? With 6 ft 3 in of interior width and near vertical walls, that won't be an issue either. The cavernous space inside ProMaster is also the perfect space for transporting equipment and materials or creating a mobile work area.

Four cargo lengths, three cargo heights, three wheelbases and three weight classes make Ram ProMaster a great choice for most any commercial task.
