# Touareg

## Specifications

# Features and Specifications

<b>Safety and Security</b>	<b>150TDI</b>	<b>150TDI Element</b>	<b>V6 TDI</b>	<b>V8 TDI R-Line</b>
<b>Airbags</b>				
Driver and front passenger airbags	S	S	S	S
Driver and front passenger side airbags	S	S	S	S
Driver's knee airbag	S	S	S	S
Outer rear seat passenger side airbags	S	S	S	S
Curtain airbags, front and rear	S	S	S	S
Rollover sensor system	S	S	S	S
<b>Anti-theft</b>				
Alarm system with interior monitoring, tilt sensor and central locking SAFELock deadlock mechanism	—	S	S	S
Electronic engine immobiliser	S	S	S	S
<b>Body</b>				
Door side impact protection	S	S	S	S
Fully galvanised, unitary constructed body with rigid safety cell and front and rear programmed crumple zones	S	S	S	S
12 year anti-corrosion perforation warranty	S	S	S	S
<b>Brakes</b>				
Automatic flashing brake lights activated in emergency braking situation	S	S	S	S
Anti-lock Braking System (ABS)	S	S	S	S
Electronic Brake-pressure Distribution (EBD)	S	S	S	S
Brake Assist	S	S	S	S
Electro-mechanical parking brake	S	S	S	S
Auto Hold function and Hill Hold Assist	S	S	S	S
Multi-collision brake	S	S	S	S
<b>First Aid kit</b>				
	A	A	A	A
<b>Head restraints</b>				
Front safety optimised head restraints	S	S	S	S
Front head restraints height adjustable	S	S	S	S
Front head restraints longitudinal adjustable	S	S	S	S
Rear adjustable and removable (3)	S	S	S	S
<b>Incorrect Fuel Filling Prevention</b>				
	S	S	S	S

<b>Safety and Security (continued)</b>	<b>150TDI</b>	<b>150TDI Element</b>	<b>V6 TDI</b>	<b>V8 TDI R-Line</b>
<b>Lighting</b>				
LED daytime driving lights	S	S	S	S
Front fog lights with static cornering lights, mounted in lower bumper	S	S	S	S
LED rear taillights	—	—	—	S
Rear fog lamp	S	S	S	S
LED rear registration plate light	S	S	S	S
Entry/warning reflectors in rear doors	S	S	S	S
<b>Locking</b>				
Remote central locking	S	S	S	S
Keyless Access, keyless entry and starting system including starter button	—	S	S	S
2 stage unlocking (programmable)	S	S	S	S
Automatic locking after takeoff (programmable)	S	S	S	S
One touch lock / unlock for driver and front passenger	S	S	S	S
Electrically operated child safety lock for rear doors	S	S	S	S
<b>Seat belts</b>				
Front height adjustable	S	S	S	S
Pre-tensioners for front and outer rear passengers	S	S	S	S
Belt force limiters for driver and front passenger	S	S	S	S
Warning buzzer and light for driver and front passenger seat belt not fastened	S	S	S	S
3 point seat belts for all passengers	S	S	S	S
Child seat anchor points mounted on rear seat (3)	S	S	S	S
ISOFIX child seat anchorage points, outer rear seats	S	S	S	S
<b>Traction control</b>				
Anti-Slip Regulation (ASR)	S	S	S	S
Electronic Differential Lock (EDL)	S	S	S	S
Electronic Stabilisation Program (ESP) with active rollover protection function	S	S	S	S
Engine Braking Control (EBC)	S	S	S	S
Off-road function with Anti-lock Braking System (ABSplus) and Hill Descent Assist	S	S	S	S
4MOTION permanent all wheel drive	S	S	S	S

Exterior Equipment / Styling	150TDI	150TDI Element	V6 TDI	V8 TDI R-Line
<b>Body enhancements</b>				
Body coloured door handles and exterior mirrors	S	S	S	S
Body coloured lower body side and bumper trim	S	S	S	S
Chrome radiator grille highlights	S	S	S	S
Chrome trim around side window frames	S	S	S	S
Chrome lower body side mouldings and rear bumper step	S	S	S	S
Dual triangular chrome exposed exhaust tail pipes, left and right	S	S	S	S
Front bumper centre lower air intake with chrome highlights	S	S	S	S
R-Line exterior body styling, front and rear bumpers, side sills and rear roof spoiler	—	—	—	S
R-Line exterior badging on front side panels	—	—	—	S
<b>Paint</b>				
Metallic or Pearl Effect paint finish	O	O	O	S
<b>Protection</b>				
Mudflaps, front and rear	A	A	A	—
Slimline weather shields	A	A	A	A
<b>Roof</b>				
Roof rails, chrome	S	S	S	S
Roof cross bars	A	A	A	A
Bicycle, ski, surfboard, snowboard and kayak holders	A	A	A	A
Roof Box Range – 340 and 460 litre volume	A	A	A	A
Urban loader box – 300 to 500 litre volume expandable	A	A	A	A
<b>Towbar</b>				
Tow bar, Horizontal hitch design	A	A	A	A
<b>Wheels</b>				
Alloy wheels (Arica) 18 x 8" with 255/55 R18 tyres (4)	S	—	—	—
Alloy wheels (Yukon) 18 x 8" with 255/55 R18 tyres (4)	—	S	—	—
Alloy wheels (Masafi) 20 x 9" with 275/45 R20 tyres (4)	—	—	S	—
Alloy wheels (Mallory) 21 x 9.5" with 275/40 R21 tyres (4)	—	—	—	S
Chrome wheel bolt covers	S	S	S	S
Anti-theft wheel bolts	S	S	S	S
Weight and space saving steel spare wheel	S	S	S	S
Electric air compressor	S	S	S	S
Tyre pressure monitoring system	—	—	—	S
<b>Window glass</b>				
Heat insulating tinted glass	S	S	S	S
Dark tinted rear side windows and rear window, 65% light absorbing	—	S	—	S
Sunblind for rear side window	A	A	A	A
Sunblind for rear window	A	S	A	A

<b>Comfort and Convenience</b>	<b>150TDI</b>	<b>150TDI Element</b>	<b>V6 TDI</b>	<b>V8 TDI R-Line</b>
<b>Air conditioning</b>				
Dual zone automatic climate control air conditioning	S	S	S	—
4 zone automatic climate control air conditioning	—	—	—	S
Air quality sensor with automatic air recirculation	S	S	S	S
Dust and pollen filter	S	S	S	S
Climate zone synchronisation	S	S	S	S
Residual heat mode (REST)	S	S	S	S
<b>Armrests</b>				
2 Part front centre armrest, adjustable with integrated storage compartment	S	S	S	S
Rear seat centre armrest, foldable including cup holders (2)	S	S	S	S
<b>Cruise control</b>				
Cruise Control	S	S	S	S

<b>Performance#</b>			
0 – 100 km/h	8.5	7.6	5.8
<b>Fuel consumption **</b>			
Combined, L/100km	7.2	7.4	9.2
Urban, L/100km	8.4	8.6	12.0
Extra Urban, L/100km	6.5	6.7	7.5
CO <sub>2</sub> emission g/km	190	196	242
Fuel tank capacity, Litres	85	100	100

\* The Start/Stop system is designed to reduce fuel consumption and CO<sub>2</sub> emissions. It achieves this by automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

# Please note figures are sourced from overseas data where equipment levels by model variant may vary.

\*\* Fuel consumption figures according to Australian Design Rule (ADR) 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.

Please note Metallic (M) and Pearl Effect (PE) paint are optional at extra cost on 150TDI, V6 TDI.

# Glossary

## 4MOTION

The power of the Touareg engine is transmitted to the wheels via the permanent 4MOTION all-wheel drive system. This flow of power is handled by a Torsen transfer box to direct drive to the wheels where required to provide the best possible traction at all road speeds, in all weather and road conditions.

## Adaptive Cruise Control (ACC)\*

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on radar sensors, multi-function camera and parking distance sensors. When ACC is activated, the vehicle automatically brakes and accelerates in a speed and distance set by the driver.

If the Touareg approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Touareg then accelerates up to the preset desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates. ACC will reactivate automatically if the traffic moves within 2 seconds, otherwise the driver can reactivate the system by depressing the accelerator pedal.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system does not react to stationary obstacles and oncoming vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

## Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

## Anti-lock Braking System (ABSplus)

In addition to the functionality of ABS, when the off road function is selected via the centre console dial the ABSplus is activated. If loose surfaces are registered, wheel lock forms a wedge in front of the wheels significantly shortening braking distances in off-road conditions.

## Auto Hold

When activated, as soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicles final braking pressure. So even when you take your foot off the brake pedal, all four wheels brakes remain applied, preventing the vehicle from rolling away without having to depress the footbrake providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

## Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

## Brake Assist

During emergency braking, Brake assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

## Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system.

Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction. EDL is active on both axles in forward and reverse and operates up to 40km/h.

## Anti-Slip Regulation (ASR)

ASR is a switchable traction control system that prevents the wheels from spinning under acceleration by reducing engine torque. It is active at speeds above 40km/h.

# Glossary

## Coasting Function<sup>^</sup>

While driving, as the driver's foot is taken off the accelerator pedal the engine is declutched, allowing the vehicle to coast and roll over a longer distance. The momentum of the vehicle is used to save fuel with a foresighted driving style. When the brake, accelerator pedal or the gear selector lever is operated, the clutch is re-engaged and engine braking / drive takes effect. Coasting Function can be selected or deselected via the multifunction display settings. The gear selector lever is required to be in the D position to be functional.

## Electronic Stabilisation Program (ESP)

ABS, EDL and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

## Engine Braking Control (EBC)

Prevents the driven wheels from locking if the accelerator is lifted very suddenly or the vehicle is braked sharply because a low gear is engaged.

## Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 65 km/h, and calculates a fatigue estimate.

If fatigue is detected, the driver is warned by information in the Multi-function Display (MFD Premium) and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

## Front Assist with City Emergency Brake (City EB) function\*

Above 30km/h, the Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. If the situation escalates, the Front Assist function provides automatic braking and/or boosting of the driver's braking force up to maximum braking in critical situations in an attempt to reduce the impact severity.

The City Emergency Brake (City EB) function is a radar based emergency braking system designed to help a driver avoid a low-speed crash or to reduce its severity. At vehicle speeds below 30km/h, City EB monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, City Emergency Braking first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action.

However, if the driver still takes no action and a collision becomes imminent, City Emergency Braking independently applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, City EB will deactivate and allow the driver to complete the avoidance manoeuvre.

Front Assist with City Emergency Brake (City EB) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

## Hill Descent Assist

Hill Descent Assist supports the driver when driving down a steep incline at the speed elected by the driver by means of actively controlled brake applications. Hill Descent Assistance will only operate when off road mode is activated, speeds are lower than 30km/h, the gradient is greater than 10%, the engine is running and the accelerator and brake pedals are not pressed.

\*Optional equipment on V6 TDI ^Only available on selected models

# Glossary

## Hill Hold Assist

The Hill Hold Assist function comes into effect when stationary on steep inclines, utilising the transmission as necessary to prevent the vehicle rolling back.

## Lane Assist\*^

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a multi-function camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the driver is warned about the situation by a steering wheel vibration.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

## Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

## Proactive occupant protection system\*

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation, the occupants and the vehicle are prepared for a possible accident. Automatic tensioning of the safety belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. In case of high transverse dynamics the side windows and optional panoramic sunroof are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.

## Side Assist\*

Side Assist, is a lane change assistant detects vehicles on the right and left hand side of the lane, in the blind spot and those vehicles coming nearer behind. The system informs with a warning light in the exterior mirror whenever a detected vehicle is close and a lane change would be dangerous. If the driver sets the indicator, the warning light begins to flash.
