Mercedes-Benz has measured all standard paint colors according to their perceptibility values. The ratings are shown in the accompanying table, with low numbers indicating less and high numbers indicating more perceptibility. This rating of relative conspicuousness is meant to aid those buyers sufficiently concerned with safety to opt for the paint finish likely to make their cars most strongly recognizable under various light conditions. (An absolute perceptibility value cannot be determined for metallic finishes: light is reflected differently by the individual metal particles in these paint finishes, depending on the observer's visual angle.)
