

Yugo

ZASTAVA

It is not an easy thing to receive an American visa. Ample checks and papers are required when passengers are in question, not to mention the car. To achieve this, YUGO was subjected to a series of difficult tests, and

PASSED THEM ALL!

The Yugo A standing in front of you, is a car intended for the US market but without parts required by the specific US regulations.

It is a little, compact and dated designed

car featured by four stroke engine, front wheel drive, front disc brakes, independent suspension all around, tubeless tires, rear heated window with a wiper, bumpers of the latest design, front air dam, thermoformed fender lining, side red stripe moulding, double reverse lights, etc.

Small turning radius, extraordinary manoeuvrability, easy parking and excellent visibility. owing to large glaze areas, tail gate and easily accessible trunk are main exterior features of Yugo A. Looking it from outside, it appears small enough, but its roomy interior is a story for itself.

A CAR WITH THE AMERICAN

VISA

A NEW MODEL FOR THE NEW WORLD

LARGER INSIDE THAN OUTSIDE

True impression about the size of this car one can have only after driving it. Inside: Yugo A is a comfortable, medium size car for five adults, made to meet requirements of the toughest US market. All inside details, including carpets, are color-coordinated: gray or camel color. Standard equipment includes radio console, cigarette lighter, head rests on all seats, front

bucket seats with adjustable backrest, dash board light intensity rheostat, transparent ideogram switches, copper fin radiators, rear swing-out quarter lights, side moving sunvisors, large rear view mirror, rear seats which when folded increase trunk space to the size in a little van.

All this to achieve:

SAFETY AND COMFORT

MANY GREAT ADVANTAGES ROLL ON FOUR WHEELS

Scoop

Brake servo unit (Yugo 55A)

Overtaking mirror and pivoted vent window

Sunvisor

Seat pockets, front backrest

Thermoformed rear side trim panel with ashtray

Rear swing - out quarter light

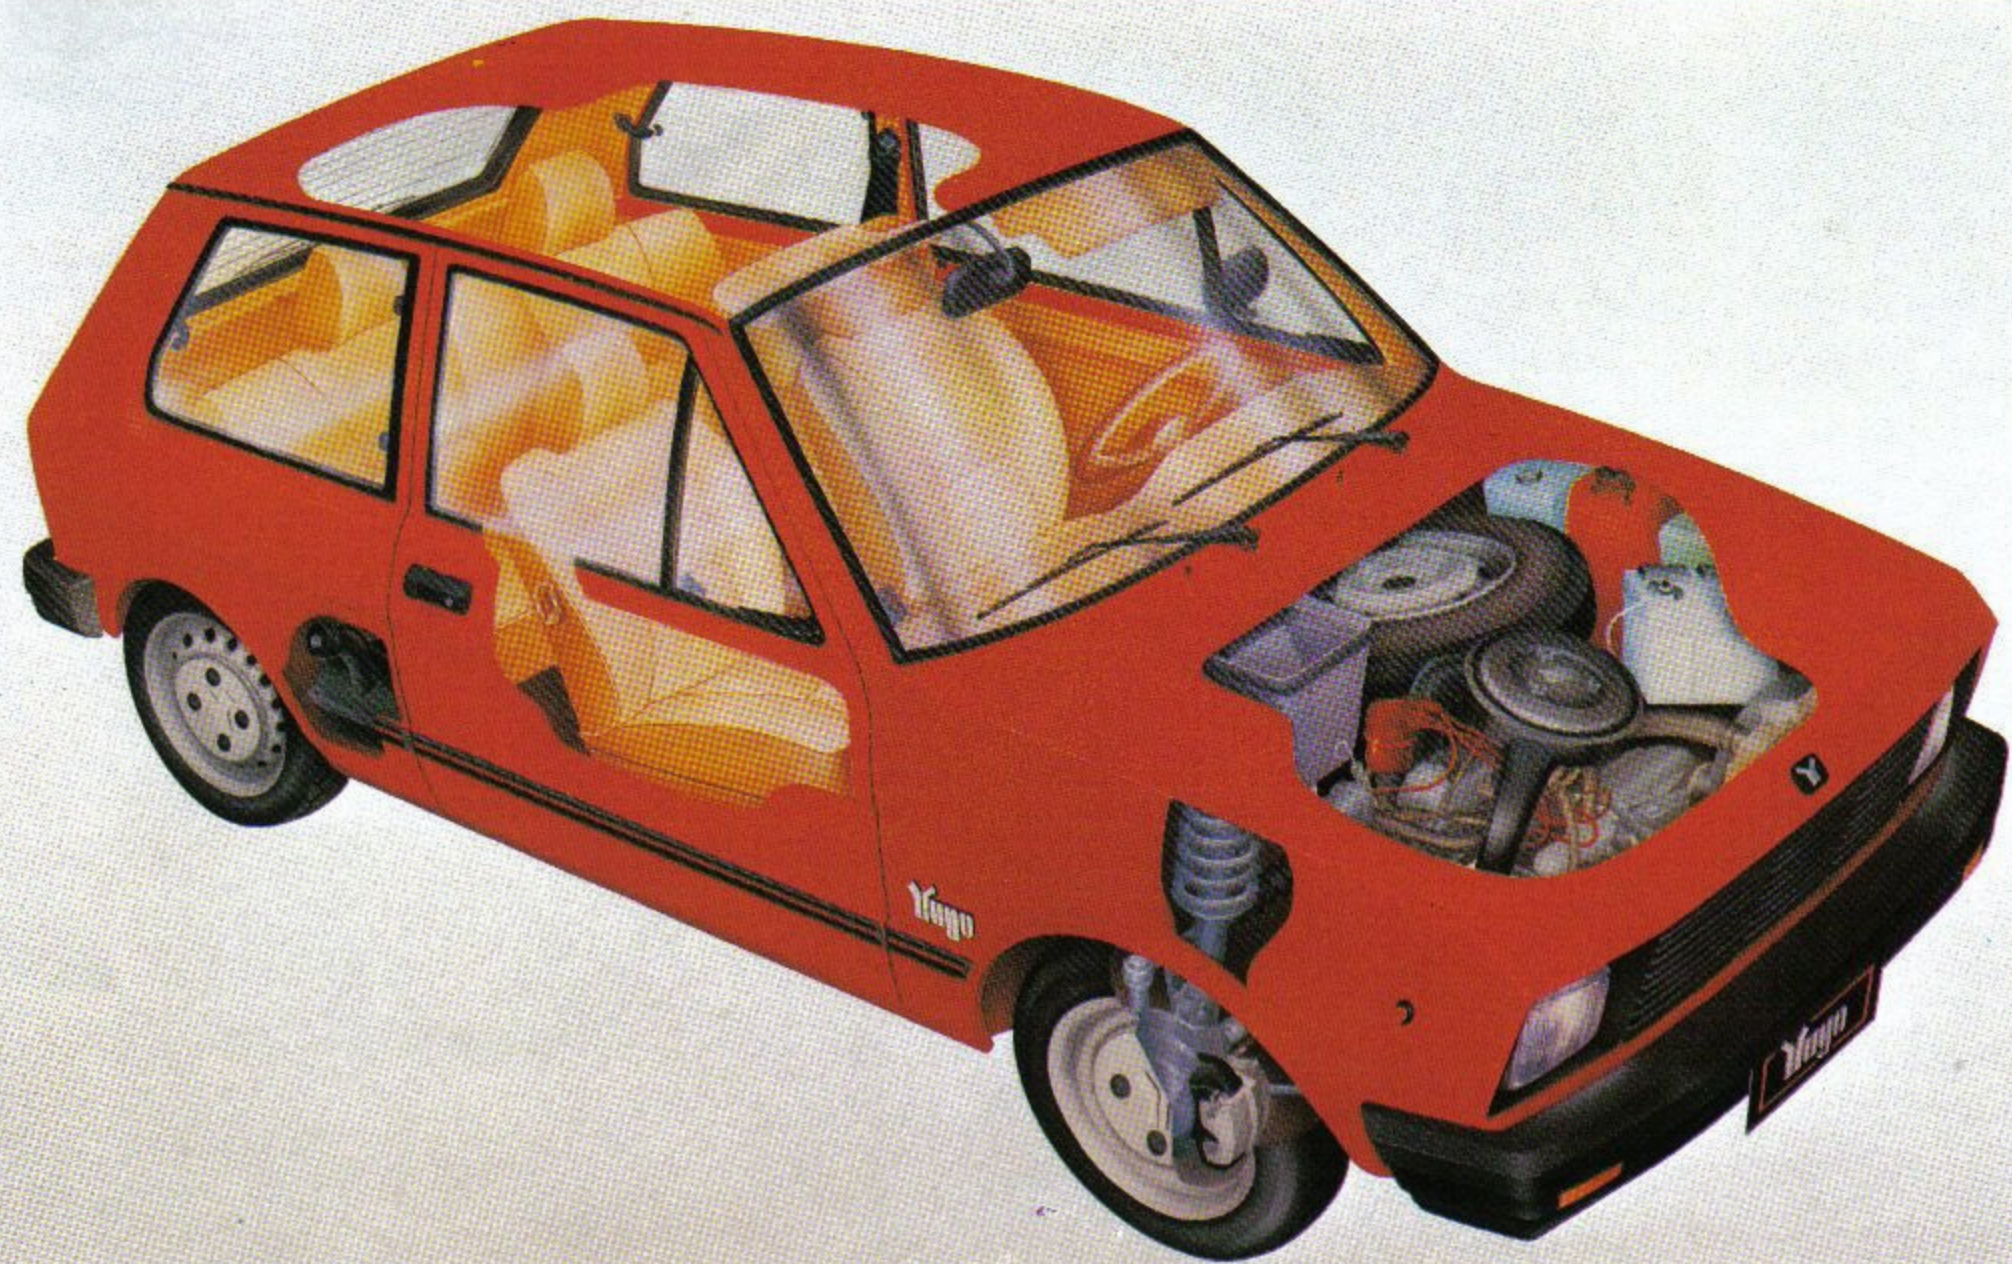

Perforated rear shelf brackets for radio installation

Defroster with wiper blade

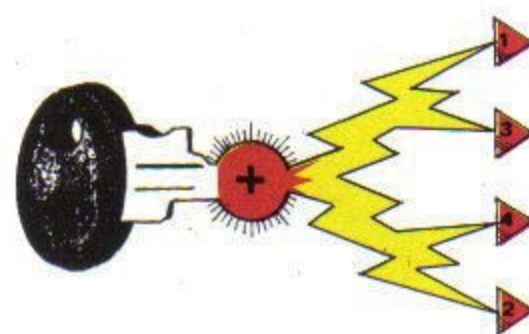

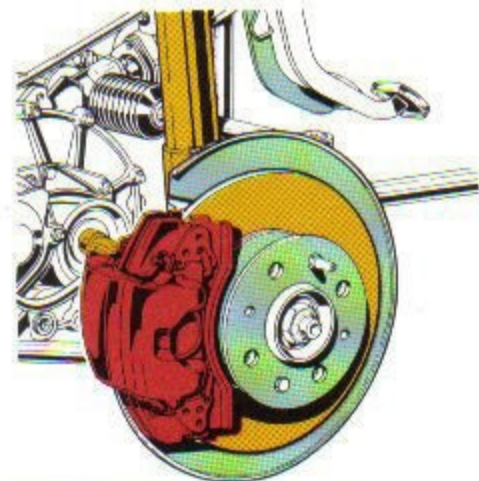

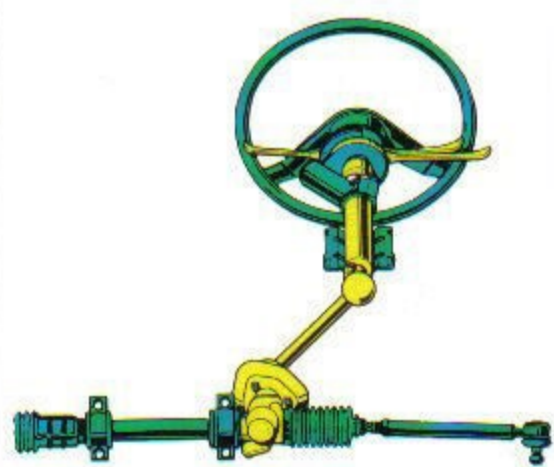

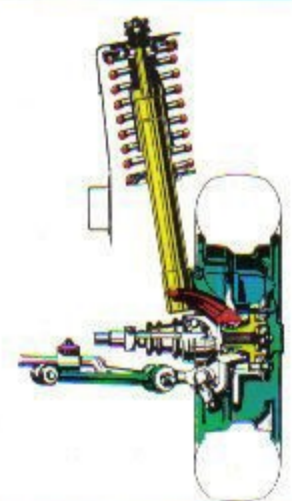

A CAR PROGRAMMED FOR FUTURE

This car of the latest design, high economy and reliability, is given some new elements by modifications made to increase safety. An alternator of higher capacity can supply enough current to all consumers even under heavy load conditions. Extended fuel tank filler neck and different battery position increase safety in case of overturning and front or side impact.

Brake servo unit in Yugo 55A provides better braking performance. Electronic contactless ignition ensures easy start even at

low temperatures and reduces fuel consumption and exhaust toxicity without any adjustments during its life-time. A new ignition distributor with vacuum advance and modified carburettor in Yugo 45A contributes to higher fuel economy and lower exhaust toxicity.

With the above, the Yugo A is a modern, safe and comfortable car designed to meet the requirements of the most demanding customers in this segment of the automotive market.

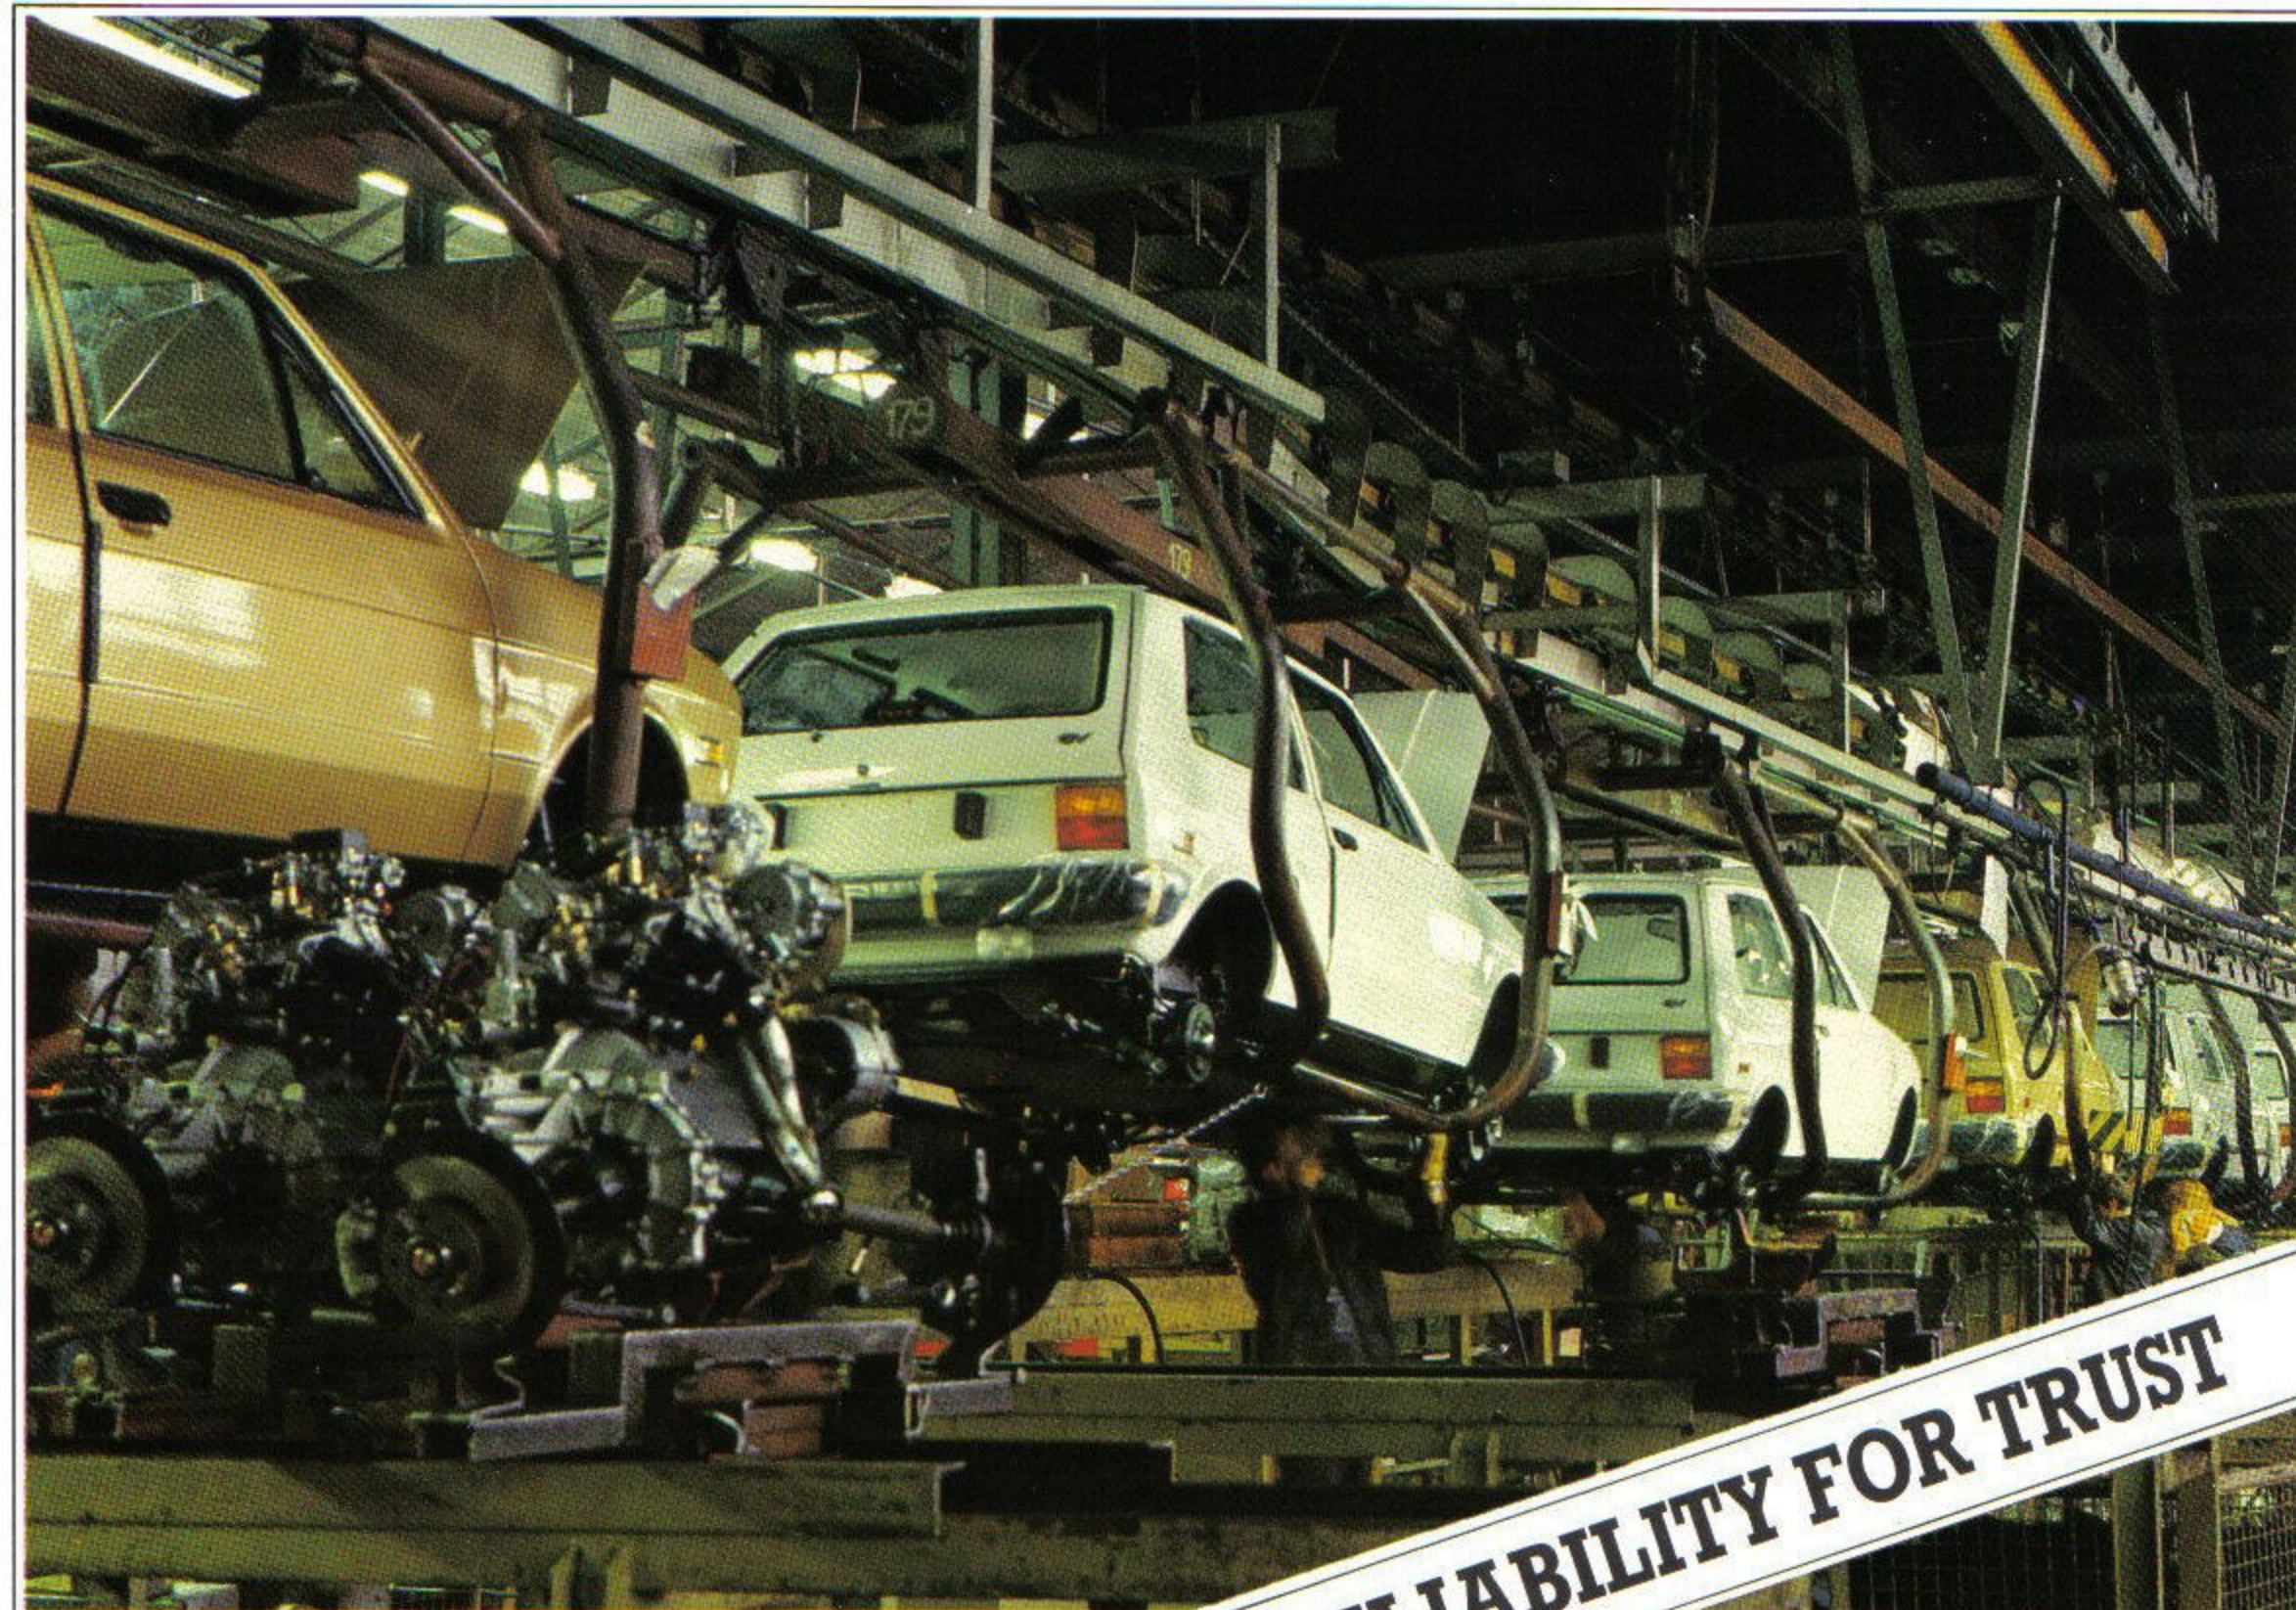

Independent suspension, front

Colapsible steering column

Front disc brakes

Electronic ignition (Yugo 55A)

NEW TECHNO

RELIABILITY FOR TRUST

LOGY

Yugo A is made by ZASTAVA, a Yugoslav manufacturer known for production of high quality weapons since last century. Knowledge and skill needed to make a rifle or a gun of high quality and long life have been usefully transferred to production of cars which have been built in Zastava for more than thirty years.

At the beginning, it was licensed production to turn later into manufacture of

automotive range developed by Zastava experts – and Yugo A being the famost family member entering the US market.

To check if the car meets the stringest regulations for quality and safety, Zastava's US partner inspected every detail of production lines, from antirust protection, done by cataphoresis process, to special inspection of each part and component built in a car.
