

Economy You Can Bank On

Many a Toyota Corona owner writes all the way to the bank, the bank that he's saving money every mile. Ford's Corona owners report an average of 28 miles per gallon economy. They make fewer stops at the gas pump—and find they're enjoying the road less gas economy to day-to-day city driving as well as on the highway. With Corona's large 12-gallon fuel tank, the high economy average means a driving range of 336 miles or more for the money invested in financing the

car. But the Toyota Corona answered its true economy in these ways: first, you'll be low initial price through its low maintenance costs. Toyota has recognized additional money-saving features like the Corona's auto

braking system, automatic battery charger and a highly efficient 2-speed automatic with planetary roller clutch. What's important, Toyota engineering—mechanical and electrical quality—insures a long life that is a shining part of every Toyota product. "The thought goes into every Toyota product," says George A. Hamilton, "There is no greater value built into any automobile. It's the quality that counts. The Toyota engineers built the Corona."

Recognition of Corona's outstanding economy and high performance is illustrated by this report from FORD TEST magazine:

"In the economy car class, currently dominated by Volkswagen, a real contender has climbed into the ring. It's Toyota's drive the Corona as well as the VW before making their decision. The Corona just might change the car market in almost every department important to buyers of the kind of vehicle the Corona gets the nod."
